

To whom it may concern,

I was responsible for conducting an AS9100:C surveillance audit of Talsco Aerospace Manufacturing in February and must say I was more than impressed with all facets observed. As a full-time auditor I see many facilities with many processes and systems, so it takes more than the status-quo for an organization to stand out in my mind which is what Talsco managed to do.

When I signed off on the audit report I did so with some enthusiasm – not only have they met the requirements laid forth in aerospace standards, but they did so with an attention to detail rarely observed. This is not an organization that creates documentation and implements requirements for the sake of achieving necessary results; they scrutinize and analyze in order to improve and deliver the best results possible.

Talsco Aerospace Manufacturing is extremely well-organized and completely dependable to the extent that I have no hesitation in giving them my endorsement.

Sincerely,
